

Go Beyond Datasheets!

FREE LIVE WEBINAR:

**June 23rd
10-10:30 am**

REGISTER NOW

**Host: Paul Klinger
Speaker: Hubert Lobo**

Designing products for the automotive industry requires material properties that cannot be found in datasheets.

Material data such as high strain-rate tensile properties are used to represent materials in crash simulations such as **PAM-CRASH, Abaqus, ANSYS** and **LS-DYNA**.

If you currently have data stored on Matereality, you owe it to yourself to attend this **FREE LIVE WEBINAR** to make the most of your high value data.

Create Material Models for Crash and Drop Simulations from Raw Tensile Data
