SEPT 16th
10-10:30 am

Host: Paul Klinger
Speaker: Hubert Lobo

Matereality is pleased to announce the release of 4.0.

Users will find data faster and use Matereality's SaaS tools to analyze like never before.

NEW INTERFACE

Data searches begin as soon as you login. Search Global Data Center OR your private database.

Tools like the Quick View and the Advanced Search functionality have been added to assist in locating data.

INTERACTIVE DATA ANALYSIS

View multiple screens at the same time to compare data. This SaaS tool automates the plotting of data with various parameters such as temperature conditioning, time or speed.

The engineer can review the data in TrueDigital format and create their own comparative tables with a single-click into excel.

CAE TRANSLATOR

Transform raw data into CAE material model input decks. Easily handle simple conversion such as elastic material models, but also complex conversions such as stress-strain data into elastic-plastic models and hyperelastic data inputs for rubber and rate dependent models for crash simulations.

This webinar will feature insight from all aspects of cloud computing with material data, including marketing, data management and security. Don't miss his informative presentation. Space is limited so sign up today.

Additional dates may be added for this presentation.
