

# Go Beyond Datasheets!

## FREE TRAINING WEBINAR:

**Wednesday, December 15th, 2010  
10-10:30 am EST**

**REGISTER NOW**

**Host: Paul Klinger  
Speaker: Hubert Lobo**

## Use Matereality from within Moldex3D R10.0

Moldex3D users can now access the Matereality Global Data Center and injection-molding relevant material data from within their software environment. Matereality's CAE Modeler can be used to convert data into Moldex3D-ready material models. Material data quality is a key factor for accurate injection molding simulation. Material Data Viewer helps users examine data in rich interactive detail prior to download into Moldex3D.

The logo for Moldex3D is written in a bold, red, stylized font. The letters are thick and have a slightly irregular, hand-drawn appearance. A registered trademark symbol (®) is located at the top right of the "D".

**See Matereality's CAE Modeler convert complex material datasets to Moldex3D models in seconds in this live demo.**
