Use Matereality from within SolidWorks Simulation

SolidWorks Simulation users can now access the Matereality Global Data Center and injection-molding relevant material data from within their software environment. Matereality's CAE Modeler can be used to convert data into SolidWorks-ready material models. Material data quality is a key factor for accurate injection molding simulation. Material Data Viewer helps users examine data in rich interactive detail prior to download into Solidworks.

See Matereality's CAE Modeler convert complex material datasets to SolidWorks Simulation models in seconds in this live demo.
